Note : Student shall undergo Internship/Project/research project/MVP/Incubation/Startup proposal in the same area as opted in 5th semester pathway.

Artificial Intelligence and Machine Learning

Government of Karnataka

DEPARTMENT OF COLLEGIATE and TECHNICAL EDUCATION

Program	Computer Science & Engineering	Semester	5
Course Code	20CS51I	Type of Course	L:T:P (104:52:312)
Course Name	Artificial Intelligence and Machine Learning	Credits	24
CIE Marks	240	SEE Marks	160

Introduction:

Welcome to the curriculum for the Artificial Intelligence and Machine Learning (AI&ML) Specialisation. This specialisation course is taught in Bootcamp mode. Bootcamps are 12 weeks, intense learning sessions designed to prepare you for the practical world – ready for either industry or becoming an entrepreneur. You will be assisted through the course, with development-based assessments to enable progressive learning. In this course, you'll learn how to produce a computer-assisted solution when data is too complex for humans to find answers as they combine both data science and machine learning skills that are needed for today's job market.

Some common examples include; Amazon Alexa - converting spoken audio into language; Google Image Search – uses image recognition to return specific search results; Samsung Smart Fridges – uses data and machine learning to produce intuitions about your behaviour. Leading to the successful completion of this bootcamp, you shall be equipped to either do an internship at an organization working in AI or do a project in AI. After the completion of your Diploma, you shall be ready to take up roles like Machine Learning Engineer, Data Scientist, Data Analyst, and more.

This course will teach you Fundamentals of AI, Python and Python libraries, data visualization, machine learning models, maths like linear algebra, data interpretation, deep learning, Version control system, cloud deployment and more. Details of the curriculum is presented in the sections below.

Pre-requisite

Before the start of this specialisation course, you would have completed the following courses;

In the 1st year of study, you would have studied Engineering Mathematics, Communication Skills, Computer Aided Engineering Graphics, Statistics & Analysis, Basic IT Skills, Fundamentals of Computer, Fundamentals of Electrical and Electronics Engineering, Project Management skills and Multimedia & Animation.

In the 2nd year of study, you would have studied Python Programming, Computer Hardware, Maintenance and Administration, Computer Networks, Database System Concepts and PL/SQL, Data Structures with Python, Operating System and Administration, Object oriented programming and Design with Java, Software Engineering principles and practices.

In this year of study, you shall be applying your previous years learning along with specialised field of study into projects and real-world applications.

Course Cohort Owner

A Course Cohort Owner is a faculty from the core discipline, who is fully responsible for one specialised field of study and the cohort of students who have chosen to study that specialised field of study.

Guidelines for Cohort Owner

1. Each Specialized field of study is restricted to a Cohort of 20 students which could include students from other relevant programs.
2. One faculty from the Core Discipline shall be the Cohort Owner, who for teaching and learning in allied disciplines can work with faculty from other disciplines or industry experts.
3. The course shall be delivered in boot camp mode spanning over 12 weeks of study, weekly developmental assessments and culminating in a mini capstone.
4. The industry session shall be addressed by industry subject experts (in contact mode/online / recorded video mode) in the discipline only.
5. The cohort owner shall be responsible to identify experts from the relevant field and organize industry session as per schedule.
6. Cohort owner shall plan and accompany the cohort for any industrial visits.
7. Cohort owner shall maintain and document industrial assignments, weekly assessments, practices and mini project.
8. The cohort owner shall coordinate with faculties across programs needed for their course to ensure seamless delivery as per time table

9. The cohort owner along with classroom sessions can augment or use supplementally teaching and learning opportunities including good quality online courses available on platforms like Karnataka LMS, Infosys Springboard, NPTEL, Unacademy, SWAYAM , etc.

Course outcome: A student should be able to

C01	Explain the concept of AI, its applications, constituents and challenges of ethics in AI.
C02	Analyze and visualize any given dataset
C03	Evaluate, optimize, build and test an AI model for a given requirement
C04	Perform comparative analysis of methods or algorithms for a given requirement
C05	Select the appropriate tools, production environment and deploy the model.

Detailed course plan

Week	CO	PO	Days	1 st session (9am to 1 pm)	L	T	P	2 ND session (1.30pm to 4.30pm)	L	T	P
1	1	1	1	1. AI based movie (Screening)			4	<ul style="list-style-type: none"> - AI influence in companies viz, Amazon, Microsoft, Google, IBM - Latest developments in AI domain <ul style="list-style-type: none"> - <u>Google's DeepMind AI Just Taught Itself To Walk - YouTube</u> - <u>Introducing Amazon Go and the world's most advanced shopping technology - YouTube</u> - <u>IBM Watson</u> - Understanding the evolution of AI and HMI (human machine interface) - Discussion on how AI will Impact of daily life, work life, work force, jobs, products and services – T 	2		1
	1	1	2	Fundamentals of AI <ul style="list-style-type: none"> - What is artificial intelligence? - How AI works - Purpose of AI - Types of Artificial Intelligence - Goals of AI - Applications of AI 	3		1	<ul style="list-style-type: none"> - Significance of data in AI - AI Software Development life cycle - Compare traditional software development with AI Software Development - Example – Game rules (Chess) Explore and prepare a report on all popular AI cloud services (ML & DL) offered by vendors - T	2		1

				- Ethics in AI Examples of AI in real world - T							
	5	4,5	3	Why Do We Need a Version Control System? Fundamentals of Git Git installation and setup basic local Git operations <ul style="list-style-type: none"> ▪ creating a repository, ▪ cloning a repository, ▪ making and recording changes ▪ staging and committing changes, ▪ viewing the history of all the changes ▪ undoing changes 	1		3	Git Branching and merging Basic <ul style="list-style-type: none"> ▪ Creating and switching to new branches ▪ Switching between branches ▪ Merging local branches together 			3
	5	4,5	4	GitHub <ul style="list-style-type: none"> - Basics of distributed git - Account creation and configuration - Create and push to repositories - versioning - Collaboration - Migration 	1		3	Create repository – named mini project-1 Push the same to GitHub <u>TOC - Git Essentials: Become a Git and GitHub Ninja Infosys Springboard (onwingspan.com)</u>			3
			5	Developmental Assessment				Assessment Review and corrective action			3
	1	1,5	6	Real industry experience of AI	2		3	Weekly Assignment(1PM-2PM)			
2	1	1	1	Peer Review		4		Machine Learning	2		1

							<ul style="list-style-type: none"> - Fundamentals - Machine learning types - Machine learning workflow - Machine learning applications - Challenges in ML - Building a model – steps involved - Pipelines <ul style="list-style-type: none"> ▪ Data engineering ▪ Machine learning ▪ Deployment - What is Data Science? - How Data Science works? - Data Science uses <p>Group discussion - Examples of ML in everyday life / Use of Machine Learning in Daily Life</p> <p>Machine Learning Terminologies - T</p> <p><u>TOC - Machine Learning Fundamentals Infosys Springboard (onwingspan.com)</u></p> <p>Prediction – continuous value</p>

CIE and SEE Assessment Methodologies

CIE Assessment	Assessment Mode	Duration In hours	Max Marks
Week 3	CIE 1- Written and practice test	4	30
Week 5	CIE 2- Written and practice test	4	30
Week 7	CIE 3- Written and practice test	4	30
Week 9	CIE 4- Written and practice test	4	30
Week 11	CIE 5- Written and practice test	4	30
	On line Course work (Minimum 10 hours online course with certification from (SWAYAM/NPTEL/Infosys Springboard)		40
	Profile building for Internship / Submission of Synopsys for project work		20
Portfolio evaluation (Based on industrial assignments and weekly developmental assessment) *			30
TOTAL CIE MARKS (A)			240
SEE 1 - Theory exam (QP from BTE) Conducted for 100 marks 3 hrs duration reduced to 60 marks		3	60
SEE 2 - Practical		3	100
TOTAL SEE MARKS (B)			160
TOTAL MARKS (A+B)			400

* The industrial assignment shall be based on peer-to-peer assessment for a total of 10 marks (on a scale of 1 to 10) and in the event of a group assignment the marks awarded will be the same for the entire group, the developmental assessment will be for a total of 20 marks and based on MCQ/case study/demonstration and such other assignment methods

Assessment framework for CIE

Note : Theory to be conducted for 1 hour and practice for 3 hours, total duration of exam – 4 hours

Programme	Computer Science & Engineering	Semester	V		
Course	Artificial Intelligence & Machine Learning	Max Marks	30		
Course Code	20CS51I	Duration	4 hours		
Name of the course coordinator					
Note: Answer one full question from each section.					
Qn.No	Question	CL L3/L4	CO	PO	Marks
Section-1 (Theory) - 10 marks					
1.a)	In recent years most of the companies are turning to text based chatbot for resolving consumer queries. What is the reason for it and how is it impacting the business.	L4	1		5
b)	Create two series as shown using pd.series() function. Series_A = [1,2,3,4,5] Series_B = [4,5,6,7,8] Get the items not common to both.	L3	2		5
2.a)	Ramesh is a solutions manager for an enterprise and has deployed all the applications in the on-premise datacentre. He has been asked to plan the infrastructure for an online foot ware store that the enterprise is developing. The traffic forecast for the application varies based on various parameters. List the implications if they continue with on-premise solution.	L4	1		4
b)	Create a dataframe with following data.	L3	2		6

	First Name	Last Name	Type	Department	YoE	Salary																																
0	Aryan	Singh	Full-time Employee	Administration	2	20000																																
1	Rohan	Agarwal	Intern	Technical	3	5000																																
2	Riya	Shah	Full-time Employee	Administration	5	10000																																
3	Yash	Bhatia	Part-time Employee	Technical	7	10000																																
4	Siddhant	Khanna	Full-time Employee	Management	6	20000																																
<p>1. Make a pivot table which shows average salary of each type of employee for each department.</p> <p>2. Make a pivot table which shows the sum and mean of the salaries of each type of employee and the number of employees of each type.</p>																																						
Section-2 (Practical) - 20 marks																																						
3)	<p>Data from an online platform has been collected. This data contains fuel consumption and 11 aspects of automobile design and performance for 32 automobiles. Variable description is given below.</p> <p>Dataset - 'mtcars.csv'</p> <table border="1"> <thead> <tr> <th>Sl No</th> <th>Variables</th> <th>Description</th> <th>Categories</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>mpg</td> <td>Miles/(US) gallon</td> <td></td> </tr> <tr> <td>2</td> <td>cyl</td> <td>Number of cylinders</td> <td>4, 6, 8</td> </tr> <tr> <td>3</td> <td>disp</td> <td>Displacement (cu.in.)</td> <td></td> </tr> <tr> <td>4</td> <td>hp</td> <td>Gross horsepower</td> <td></td> </tr> <tr> <td>5</td> <td>drat</td> <td>Rear axle ratio</td> <td></td> </tr> <tr> <td>6</td> <td>wt</td> <td>Weight (1000 lbs)</td> <td></td> </tr> </tbody> </table>						Sl No	Variables	Description	Categories	1	mpg	Miles/(US) gallon		2	cyl	Number of cylinders	4, 6, 8	3	disp	Displacement (cu.in.)		4	hp	Gross horsepower		5	drat	Rear axle ratio		6	wt	Weight (1000 lbs)		L3,L4	1,2		
Sl No	Variables	Description	Categories																																			
1	mpg	Miles/(US) gallon																																				
2	cyl	Number of cylinders	4, 6, 8																																			
3	disp	Displacement (cu.in.)																																				
4	hp	Gross horsepower																																				
5	drat	Rear axle ratio																																				
6	wt	Weight (1000 lbs)																																				

7	qsec	Fastest time to travel 1/4 mile from standstill (in seconds)					
8	vs	Engine cylinder configuration	0, 1 (0 -V-shape; 1 - Straight Line)				
9	am	Transmission type	0, 1 (0 - automatic; 1 - manual)				
10	gear	Number of forward gears	3, 4 , 5 Manual transmissions have either 4 or 5 forward gears; Automatic either 3 or 4				
11	carb	Number of carburettors	1, 2, 3, 4, 6, 8				

Create the following plots to visualize/summarize the data and customize appropriately.

1. histogram to check the frequency distribution of the variable 'mpg' (Miles per gallon) and note down the interval having the highest frequency.
2. scatter plot to determine the relation between weight of the car and mpg
3. bar plot to check the frequency distribution of transmission type of cars.
4. Box and Whisker plot of mpg and interpret the five number summary.
5. Create a git repository and push source code to repo.

Note : Theory questions shall be aligned to practical questions

Scheme of evaluation

Sl. No	Description	Marks
1	Importing libraries, data, removing missing values	4
2	Creating plots and customization	8
3	Create Git repository and push files	4
4	Interpretation of thus created plots	4
Total		20

Assessment framework for SEE 1 (Theory) – 100 Marks / 3 hours (Reduced to 60 marks)

Programme: Computer Science & Engineering		Semester: V		
Course: Artificial Intelligence & Machine Learning		Max Marks: 100		
Course Code: 20CS51I		Duration: 3 Hrs		
Instruction to the Candidate:		Answer one full question from each section.		
Qn.No	Question	CL	CO	Marks
Section-1				
1.a)	With Industry 4.0, artificial intelligence is finding place in every aspect of life. What happens if AI replaces humans in the workplace?	L4	1	10
b)	For the given scenarios you are required to build an AI solution. Which AI techniques can be applied / best suited for stated problems. Justify 1. Extract and digitize the customer information from the Know Your Customer (KYC) forms. 2. To identify if employees are wearing face mask in the office campus	L3		10

	<p>3. To identify and narrow down tumour regions and further predict if the tumour is malignant or not</p> <p>4. Automated inspection and cost estimation step in the Insurance claim business process</p> <p>5. To identify the location of a moving car within an image</p>																																																
2.a)	Which technique help in addressing certain complex problems with higher accuracy and better generalization characteristics much like human brain in Computer Vision, Natural Language Processing and Speech Domains? And why?	L3		10																																													
b)	<p>For the following scenarios you are required to build a predictive model. Which machine learning technique/ algorithm can be applied / best suited for stated problems. Justify your recommendation.</p> <p>a. Predicting the food delivery time</p> <p>b. Predicting whether the transaction is fraudulent</p> <p>c. Predicting the credit limit of a credit card applicant</p> <p>d. To group similar customers of an online grocery store, based on their purchasing patterns, to offer discounts to its customers.</p> <p>e. Predict the probability of a mechanical system breakdown, based on its system vibration and operating temperature</p>	L3		10																																													
Section-2																																																	
3.a)	How to handle the missing values in the dataset? Explain.	L3	2	10																																													
b)	<p>The statistical summary of Iris dataset is as follows.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th>sepal-length</th> <th>sepal-width</th> <th>petal-length</th> <th>petal-width</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>count</td> <td>150.000000</td> <td>150.000000</td> <td>150.000000</td> </tr> <tr> <td>2</td> <td>mean</td> <td>5.843333</td> <td>3.054000</td> <td>3.758667</td> </tr> <tr> <td>3</td> <td>std</td> <td>0.828066</td> <td>0.433594</td> <td>1.764420</td> </tr> <tr> <td>4</td> <td>min</td> <td>4.300000</td> <td>2.000000</td> <td>1.000000</td> </tr> <tr> <td>5</td> <td>25%</td> <td>5.100000</td> <td>2.800000</td> <td>1.600000</td> </tr> <tr> <td>6</td> <td>50%</td> <td>5.800000</td> <td>3.000000</td> <td>4.350000</td> </tr> <tr> <td>7</td> <td>75%</td> <td>6.400000</td> <td>3.300000</td> <td>5.100000</td> </tr> <tr> <td>8</td> <td>max</td> <td>7.900000</td> <td>4.400000</td> <td>6.900000</td> </tr> </tbody> </table> <p>Analyse and explain statistical metrics from above summary.</p>		sepal-length	sepal-width	petal-length	petal-width	1	count	150.000000	150.000000	150.000000	2	mean	5.843333	3.054000	3.758667	3	std	0.828066	0.433594	1.764420	4	min	4.300000	2.000000	1.000000	5	25%	5.100000	2.800000	1.600000	6	50%	5.800000	3.000000	4.350000	7	75%	6.400000	3.300000	5.100000	8	max	7.900000	4.400000	6.900000	L4		10

8	max	7.900000	4.400000	6.900000																																													

4.a)	<p>Consider a real estate company that has a dataset containing the prices of properties in the Delhi region. It wishes to use the data to optimise the sale prices of the properties based on important factors such as area, bedrooms, parking, etc.</p> <p>Essentially, the company wants —</p> <ol style="list-style-type: none"> To identify the variables affecting house prices, e.g. area, number of rooms, bathrooms, etc. To create a model that quantitatively relates house prices with variables such as number of rooms, area, number of bathrooms, etc. To know the accuracy of the model, i.e. how well these variables can predict house prices. <p>Discuss the steps to be followed to build such a model. Recommend the suitable techniques to consider at each step.</p>	L3		10
b)	Describe univariate, bivariate, and multivariate analysis with suitable examples.	L4		10
Section- 3				
5.a)	<p>N-grams are defined as the combination of N keywords together. Consider the given sentence:</p> <p>“Data Visualization is a way to express your data in a visual context so that patterns, correlations, trends between the data can be easily understood.”</p> <p>Generate bi-grams and tri-grams for the above sentence</p> <ol style="list-style-type: none"> Before performing text cleaning steps. After performing following text cleaning steps: <ol style="list-style-type: none"> Stop word Removal Replacing punctuations by a single space 	L3	3	10
b)	K-means clustering with Euclidean distance suffer from the curse of dimensionality. Is the statement true and why?	L4		10
6.a)	<p>The sinking of the Titanic is one of the most infamous shipwrecks in history. On April 15, 1912, during her maiden voyage, the widely considered “unsinkable” RMS Titanic sank after colliding with an iceberg. Unfortunately, there weren’t enough lifeboats for everyone onboard, resulting in the death of 1502 out of 2224 passengers and crew. You are asked to build a machine learning model to predict whether a passenger survived or not. Describe each step you will follow to build this model.</p>	L3		10

b)	You work for a textile manufacturer and have been asked to build a model to detect and classify fabric defects. You trained a machine learning model with high recall. You want quality control inspectors to gain trust in your model. Which technique should you use to understand the rationale of your classifier? Justify	L4		10															
Section-4																			
7.a)	<p>A machine learning model was built to classify patient as covid +ve or -ve. The confusion matrix for the model is as shown below. Compute other performance metrics and analyse the performance of the model.</p> <table style="margin-left: auto; margin-right: auto;"> <tr> <td colspan="2"></td> <td colspan="2" style="text-align: center;">Actual</td> </tr> <tr> <td colspan="2"></td> <td style="text-align: center;">1</td> <td style="text-align: center;">0</td> </tr> <tr> <td rowspan="2" style="vertical-align: middle;">Predicted</td> <td style="text-align: center;">1</td> <td style="border: 1px solid black; text-align: center;">397</td> <td style="border: 1px solid black; text-align: center;">103</td> </tr> <tr> <td style="text-align: center;">0</td> <td style="border: 1px solid black; text-align: center;">126</td> <td style="border: 1px solid black; text-align: center;">142</td> </tr> </table>			Actual				1	0	Predicted	1	397	103	0	126	142	L3	4	10
		Actual																	
		1	0																
Predicted	1	397	103																
	0	126	142																
b)	A Machine Learning Engineer is preparing a data frame for a supervised learning task. The ML Engineer notices the target label classes are highly imbalanced and multiple feature columns contain missing values. The proportion of missing values across the entire data frame is less than 5%. What should the ML Engineer do to minimize bias due to missing values? Support your argument.	L4		10															
8.a)	A data scientist is working on optimising a model during the training process by varying multiple parameters. The data scientist observes that, during multiple runs with the identical parameters the loss function converges to different, yet stable values. What should the data scientist do to improve the training process? Justify.	L3		10															
b)	A company has collected customer comments on its products, rating them as safe or unsafe, using decision trees. The training dataset has the following features: id, date, full review, full review summary, and a binary safe/unsafe tag. During training, any data sample with missing features was dropped. In a few instances, the test set was found to be missing the full review text field. For this use case, which is the most effective course of action to address test data samples with missing features. Justify	L4																	
Section-5																			
9.a)	What are the deployment strategies borrowed from DevOps that can be utilized in MLOPs. Explain anyone strategy.	L3	5	10															

b)	Machine learning models can be resource heavy. They require a good amount of processing power to predict, validate, and recalibrate, millions of times over. How can containerisation of ML model solve this problem?	L3		10
10.a)	How will you deploy a trained machine learning model as a predictive service in a production environment. Explain.	L3		10
b)	For the below given scenarios, suggest best suited cloud deployment model and list the challenges with it. 1. For, a. Variable workload b. Test and Development 2. For, a. Cloud bursting b. On demand access c. Sensitive data	L3		10

Assessment framework for SEE 2 (Practice)

Problem Statement

Complete the code below to construct and fit the required model, then visualize the final architecture and learning process using TensorBoard

```
import tensorflow as tf

# Define log folder of tensorboard
log_folder = 'logs'

# Import and prepare dataset
mnist = tf.keras.datasets.mnist
(X_train, y_train), (X_test, y_test) = mnist.load_data()
X_train, X_test = X_train / 255.0, X_test / 255.0

print('Training Dataset Shape: {}'.format(X_train.shape))
print('No. of Training Dataset Samples: {}'.format(len(X_test)))
print('Test Dataset Shape: {}'.format(X_test.shape))
print('No. of Test Dataset Samples: {}'.format(len(y_test)))

# 1 .Define model
model = keras.models.Sequential()
# ...
```

```
# ...  
  
# 2. Configure Tensorboard  
log_dir = "logs/fit/" + datetime.datetime.now().strftime("%Y%m%d-%H%M%S")  
# ...  
# ...  
  
# 3. Compile and train model  
# ...  
# ...  
  
# 4. Show TensorBoard  
# ...  
# ...
```

Output:

```
Training Dataset Shape: (60000, 28, 28)  
No. of Training Dataset Samples: 10000  
Test Dataset Shape: (10000, 28, 28)  
No. of Test Dataset Samples: 10000
```

1. The neural network must have the following architecture:
 - One Flatten() layer.
 - One Dense layer with 512 neurons using a ReLU as the activation function.
 - A Dropout layer with the probability of retaining the unit of 20%.
 - A final Dense layer, that computes the probability scores via the softmax function, for each of the 10 output labels.
2. Place the logs of TensorBoard in a timestamped subdirectory to allow easy selection of different training runs and create the appropriate callbacks that ensure that logs are created and stored. Additionally, enable histogram computation for every epoch.
3. Compile and train the model using **stochastic gradient descent** with the objective function `sparse_categorical_crossentropy` and 10 epochs.
4. Start TensorBoard through the command line or within a notebook experience. The two interfaces are generally the same. In notebooks, use the `%tensorboard` line magic. On the command line, run the same command without `"%"`. Show and explain the dashboards.
5. Show the losses and the final architecture on TensorBoard.

Scheme of evaluation

Sl. No	Description	Marks
1	Problem analysis	10
2	Selection of tools/technics and Importing libraries	10
3	Construct neural network with specifications	40
4	Visualize the final architecture and learning process using TensorBoard	40
Total		100

Equipment/software list with Specification for a batch of 20 students

Sl. No.	Particulars	Specification	Quantity
1.	Computers	Intel i7, 4GB RAM, 500GB SSD	20
2.	Python (Anaconda Distribution), Git, Jira, Jenkins, TensorFlow or similar tools		
3.	Cloud – AWS/AZURE/GCB or any similar cloud environment		
4.	Broadband connection		

Full Stack Development

Government of Karnataka

DEPARTMENT OF COLLEGIATE and TECHNICAL EDUCATION

Program	Computer Science & Engineering	Semester	5
Course Code	20CS52I	Type of Course	L:T:P (104:52:312)
Course Name	Full Stack Development	Credits	24
CIE Marks	240	SEE Marks	160

Introduction:

Welcome to the curriculum for the Full Stack Development Specialisation. This specialisation course is taught in Bootcamp mode. Bootcamps are 12 weeks, intense learning sessions designed to prepare you for the practical world – ready for either industry or becoming an entrepreneur. You will be assisted through the course, with development-based assessments to enable progressive learning. In this course, you'll learn a complete suite of software development skills to build application like front-end, middleware, and back-end Java web developer technologies, test and deploy code, store data using MongoDB, and much more.

This course will teach you Fundamentals of business process automation, React, Spring, MongoDB, REST API, DevOps practices, cloud deployment and more. Details of the curriculum is presented in the sections below.

Pre-requisite

Before the start of this specialisation course, you would have completed the following courses;

In the 1st year of study, you would have studied Engineering Mathematics, Communication Skills, Computer Aided Engineering Graphics, Statistics & Analysis, Basic IT Skills, Fundamentals of Computer, Fundamentals of Electrical and Electronics Engineering, Project Management skills and Multimedia & Animation.

In the 2nd year of study, you would have studied Python Programming, Computer Hardware, Maintenance and Administration, Computer Networks, Database System Concepts and PL/SQL,

Data Structures with Python, Operating System and Administration, Object oriented programming and Design with Java, Software Engineering principles and practices.

In this year of study, you shall be applying your previous years learning along with specialised field of study into projects and real-world applications.

Course Cohort Owner

A Course Cohort Owner is a faculty from the core discipline, who is fully responsible for one specialised field of study and the cohort of students who have chosen to study that specialised field of study.

Guidelines for Cohort Owner

1. Each Specialized field of study is restricted to a Cohort of 20 students which could include students from other relevant programs.
2. One faculty from the Core Discipline shall be the Cohort Owner, who for teaching and learning in allied disciplines can work with faculty from other disciplines or industry experts.
3. The course shall be delivered in boot camp mode spanning over 12 weeks of study, weekly developmental assessments and culminating in a mini capstone.
4. The industry session shall be addressed by industry subject experts (in contact mode/online / recorded video mode) in the discipline only.
5. The cohort owner shall be responsible to identify experts from the relevant field and organize industry session as per schedule.
6. Cohort owner shall plan and accompany the cohort for any industrial visits.
7. Cohort owner shall maintain and document industrial assignments, weekly assessments, practices and mini project.
8. The cohort owner shall coordinate with faculties across programs needed for their course to ensure seamless delivery as per time table
9. The cohort owner along with classroom sessions can augment or use supplementally teaching and learning opportunities including good quality online courses available on platforms like Karnataka LMS, Infosys Springboard, NPTEL, Unacademy, SWAYAM , etc.

Course outcome: A student should be able to

C01	Explain typical business process in an organization and identify opportunities for digital transformation.
C02	Document system requirements and write an appropriate development plan.
C03	Design, develop and test an automated business process.
C04	Develop RESTful API's and test functions as per the defined requirements.
C05	Select an appropriate production environment, UI and deploy the application.

Detailed course plan

We ek	C O	P O	Da ys	1 st session (9am to 1 pm)	L	T	P	2 ND session (1.30pm to 4.30pm)	L	T	P

CIE and SEE Assessment Methodologies

CIE Assessment	Assessment Mode	Duration In hours	Max Marks
Week 3	CIE 1- Written and practice test	4	30
Week 5	CIE 2- Written and practice test	4	30
Week 7	CIE 3- Written and practice test	4	30
Week 9	CIE 4- Written and practice test	4	30
Week 11	CIE 5- Written and practice test	4	30
	On line Course work (Minimum 10 hours online course with certification from (SWAYAM/NPTEL/Infosys Springboard)		40
	Profile building for Internship / Submission of Synopsys for project work		20
Portfolio evaluation (Based on industrial assignments and weekly developmental assessment) *			30
TOTAL CIE MARKS (A)			240
SEE 1 - Theory exam (QP from BTE) Conducted for 100 marks 3 hrs duration reduced to 60 marks		3	60
SEE 2 - Practical		3	100
TOTAL SEE MARKS (B)			160
TOTAL MARKS (A+B)			400

* The industrial assignment shall be based on peer-to-peer assessment for a total of 10 marks (on a scale of 1 to 10) and in the event of a group assignment the marks awarded will be the same for the entire group, the developmental assessment will be for a total of 20 marks and based on MCQ/case study/demonstration and such other assignment methods

Assessment framework for CIE

Note : Theory to be conducted for 1 hour and practice for 3 hours, total duration of exam – 4 hours

Programme	Computer Science & Engineering	Semester	V		
Course	Full Stack Development	Max Marks	30		
Course Code	20CS52I	Duration	4 hours		
Name of the course coordinator					
Note: Answer one full question from each section.					
Qn.No	Question	CL L3/L4	CO	PO	Marks
Section-1 (Theory) - 10 marks					
1.a)	Explain how digital transformation can bring revolution in teaching learning process	L4	1	1	5
b)	How DevOps enables faster development of new products and easier maintenance of existing deployments?	L3	1	4	5
2.a)	Passwords alone fail to provide protection because they can be guessed and phished. How to strengthen authentication for a banking portal?	L3	1	2	5
b)	The cloud is a hot topic from small businesses to global enterprises. If an organization begins to consider switching its business to the cloud, it is crucial to understand the differences and advantages of the various cloud services. The three main cloud services to consider are IaaS, PaaS and SaaS. For each of these service types, which of the following are managed by you as a consumer and service provider. Applications, Virtualization, Operating System, Storage, Networking, Data, Server.	L4	1	4	5
Section-2 (Practical) - 20 marks					
3)	In an open-source community, many developers contribute to an application. A new contributor develops a feature 'A' and wants to commit to master repository. As an admin you have to make sure that only reviewed code is committed to master branch.	L3	5	4	20

Note : Theory questions shall be aligned to practical questions

Scheme of evaluation

Sl. No	Description	Marks
1	Problem analysis and identification of tools to be used	4
2	Implementation	12
3	Demonstration of solution	4
Total		20

Assessment framework for SEE (Theory) – 100 Marks / 3 hours (Reduced to 60 marks)

Programme: Computer Science & Engineering		Semester: V		
Course: Full Stack Web Development		Max Marks: 100		
Course Code: 20CS52I		Duration: 3 Hrs		
Instruction to the Candidate: Answer one full question from each section.				
Qn.No	Question	CL	CO	Marks
Section-1				
1.a)	Digital transformation is creating new — or modifying existing — business processes, culture, and customer experiences to meet changing business and market requirements. Explain how digital transformation has brought revolution in retail purchases with an example	L4	1	10
b)	Diagnostic imaging procedures are cutting-edge technology, but at the same time they are an unpleasant experience for patients – and even more for paediatric patients. Explain how design thinking helped Doug Dietz, an industrial designer, create a scanner experience that children loved.	L4		10

2.a)	Identify the tasks involved in the process of receiving Admission Ticket for semester exams in your college. Which of the identified tasks can be automated and illustrate automation of one task.	L4		10
b)	Identify the following cloud service types and list their characteristics and advantages. Cisco WebEx Google App Engine, Amazon EC2	L3		10
Section-2				
3.a)	BookingHall is an online convention hall booking application that helps its users to book hall for functions across Karnataka. This application allows users to log in for booking a hall. Users can find the halls in a specific locality. Once found, user can check the availability of a hall for specific dates. Users can block a hall for required duration. Once blocked, user can get the booking details. Identify and write the user stories for this application.	L4	2	12
b)	Write test cases for the above application.	L3		8
4.a)	eDesert is an online shopping application that helps its users to buy variety of authentic deserts. This application allows users to log in for buying deserts. Users can search for a desert, sort the desert list based on rating or price. Users can select the items and add them to the cart. Once the selection is done, users can go to the cart page for payment. Identify and write the user stories for this application.	L4		12
b)	Write test plan and test cases for the above application.	L3		8
Section- 3				
5.a)	The HR team of an organization needs an application to maintain its employee details. Create a Spring Boot application to maintain Employee details such as employee id, employee name, and department and perform the following database operations. <ul style="list-style-type: none"> - Insert a new employee detail - Remove employee details based on employee id - Search employee based on name or ID 	L3	3	12
b)	Design an application that consumes EmailService , to send emails to recipient mail addresses. The design should accommodate any new email services. It should also support additional messaging feature.	L3		8

6.a)	The write operations on the collection are very high. Explain the technic applicable to manage the given scenario.	L3		12
b)	Compare the database communication through JDBC and ORM.	L3		8
Section-4				
7.a)	Ram is a developing a feature of an online apparel application as service. How should he handle the different requests to the service.	L3	4	12
b)	Users of Instagram, a photo sharing application, can share photographs not only with Instagram friends but also with friends on other social networking applications such as Twitter and Facebook. Explain how is this possible.	L3		8
8.a)	Develop the data access layer of the Employee Management Application to perform the database operations given below using Spring Data JPA Add the operation given below using Spring Data JPA: Update the employeeContactNumber for the given employee id.	L3		10
b)	Create a RESTcontroller class to perform CRUD operations on product and corresponding request and response DTOs. The product class should contain three data members product name, product category, price. Use proper SpringBoot annotations.	L3		10
Section-5				
9.a)	Discuss the Components of Docker container.	L3	5	6
b)	Draw the CI/CD build process flow diagram for an online foot ware store application and explain each component.	L3		8
c)	You want to have two versions of your application in production, but be able to switch all traffic between them. Explain the deployment strategy suitable for the given situation.	L3		6
10.a)	Create a form to add a new product detail to the product catalogue using React.	L3		10
b)	Ted is a DevOps engineer. He wants to automate the deployment process. He wants to do deployment frequently on multiple servers and change the CPU speed and RAM based on the requirement.	L3		10

Assessment framework for SEE 2 (Practice)

Problem Statement

1 InfyCabs is an application for booking cabs. Its following functionalities needs to be exposed as REST API:

- Book a cab
- Get booking details
- Cancel booking

The service and persistence layer of this application is already implemented. You have to implement the API layer of this application for exposing the above functionalities.

CabBookingAPI

Implement the CabBookingAPI class based on the class diagram and instructions given below:

Annotate this class with proper annotation to declare it as REST controller class.

Annotate this class with proper annotation so that all its methods are mapped with `/bookings` as base URI.

Inject `bookingService` and `environment` using appropriate annotation.

Method description:

`bookCab(CabBookingDTO cabBookingDTO)`

- This is a REST controller method to book a cab.
- Implement it using proper annotations according to description given below:
Resource endpoint: /
HTTP method: POST
Input: Booking details as part of HTTP request body.

- It should invoke the bookCab() method of BookingServiceImpl class which returns a booking id.
- Retrieve the success message associated with property API.BOOKING_SUCCESSFUL from application.properties files using environment and append it to booking id in following format:
 <success message>booking id
- It returns an object of ResponseEntity created using above message and HTTP status code as CREATED.

getBookingDetails(Long mobileNo)

- This is a REST controller method to get cab booking details based on mobile number of user.
- Implement it using proper annotations according to description given below:
 Resource endpoint: /{mobileNo}
 HTTP method: GET
 Input: mobileNo as path variable.
- It should invoke the getDetails() method of BookingServiceImpl class which returns a List<CabBookingDTO>.
- It returns an object of ResponseEntity created using List<CabBookingDTO> obtained in previous step and HTTP status code as OK.

cancelBooking(Integer bookingId)

- This is a REST controller method to cancel cab booking based on bookingId.
- Implement it using proper annotations according to description given below:
 Resource endpoint: /{bookingId}
 HTTP method: PUT
 Input: bookingId as path variable.
- It should invoke cancelBooking() method of BookingServiceImpl class.
- Retrieve the message associated with property “API.BOOKING_CANCELLED” from the properties file.
- It returns an object of ResponseEntity created using above message and HTTP status code as OK.

2. Test the thus created REST APIs

Analyse the given problem statement	10
Selecting suitable tools to implement above case	10
Implementation	40
Use of appropriate annotations	20

Testing	20
Total	100

Equipment/software list with Specification for a batch of 20 students

Sl. No.	Particulars	Specification	Quantity
5.	Computers	Intel i7, 4GB RAM, 500GB SSD	20
6.	Eclipse/InteliJ , Java, Apache Maven, Spring 5.0, MongoDB, MySQL, Node.js, React, Jira, Git, Bitbucket, Jenkins, GitHub Actions.		
7.	Cloud - AWS/AZURE/GCB or any similar cloud environment		
8.	Broadband connection		

Cloud Computing

Government of Karnataka

DEPARTMENT OF COLLEGIATE and TECHNICAL EDUCATION

Program	Computer Science & Engineering	Semester	5
Course Code	20CS53I	Type of Course	L:T:P (104:52:312)
Course Name	Cloud Computing	Credits	24
CIE Marks	240	SEE Marks	160

Introduction:

With technological advances, the future is set to be highly competitive and agility is the need of the hour. With cloud computing, organizations can save money on storage, servers and management services, as these services can be moved to the cloud with minimum cost, making the operations more efficient. The cloud offers businesses more flexibility overall versus hosting on a local server. And, for need of extra bandwidth, a cloud-based service can meet that demand instantly, rather than undergoing a complex (and expensive) update to the existing IT infrastructure.

This specialisation course is taught in Bootcamp mode. Bootcamps are 13 weeks, intense learning sessions designed to prepare you for the practical world – ready for either industry or becoming an entrepreneur. You will be assisted through the course, with development-based assessments to enable progressive learning.

This course will teach you Fundamentals of cloud computing Architecture, Compute instances, High Availability and Scalability in Cloud, Databases, Cloud Storage Service, DNS Services and Content Delivery, Serverless Computing, Container Services, Monitoring & Auditing and Cloud Security. Details of the curriculum is presented in the sections below.

Note: Faculty and students are required to use Amazon Web Service (AWS) cloud platform to practice the lab exercises in week 1 to week 9 and similarly use Microsoft Azure cloud platform for week 10 to week 12 of the curriculum.

Pre-requisite

Before the start of this specialisation course, you would have completed the following courses;

In the 1st year of study, you would have studied Engineering Mathematics, Communication Skills, Computer Aided Engineering Graphics, Statistics & Analysis, Basic IT Skills, Fundamentals of Computer, Fundamentals of Electrical Electronics Engineering, Project Management skills and Multimedia & Animation.

In the 2nd year of study, you would have studied Python Programming, Computer Hardware, Maintenance and Administration, Computer Networks, Database System Concepts and PL/SQL, Data Structures with Python, Operating System and Administration, Object oriented programming and Design with Java, Software Engineering principles and practices.

In this year of study, you shall be applying your previous years learning along with specialised field of study into projects and real-world applications.

Course Cohort Owner

A Course Cohort Owner is a faculty from the core discipline, who is fully responsible for one specialised field of study and the cohort of students who have chosen to study that specialised field of study.

Guidelines for Cohort Owner

1. Each Specialized field of study is restricted to a Cohort of 20 students which could include students from other relevant programs.
2. One faculty from the Core Discipline shall be the Cohort Owner, who for teaching and learning in allied disciplines can work with faculty from other disciplines or industry experts.
3. The course shall be delivered in boot camp mode spanning over 12 weeks of study, weekly developmental assessments and culminating in a mini capstone.
4. The industry session shall be addressed by industry subject experts (in contact mode/online / recorded video mode) in the discipline only.
5. The cohort owner shall be responsible to identify experts from the relevant field and organize industry session as per schedule.
6. Cohort owner shall plan and accompany the cohort for any industrial visits.
7. Cohort owner shall maintain and document industrial assignments, weekly assessments, practices and mini project.
8. The cohort owner shall coordinate with faculties across programs needed for their course to ensure seamless delivery as per time table

9. The cohort owner along with classroom sessions can augment or use supplementally teaching and learning opportunities including good quality online courses available on platforms like Karnataka LMS, Infosys Springboard, NPTEL, Unacademy, SWAYAM , etc.

Course outcome: A student should be able to

C01	Work in cloud environment to demonstrate various aspects of Cloud computing and leverage them for project needs
C02	Demonstrate the Public cloud services like compute, storage, networking, IAM, databases and configure them for given specification
C03	Design, build and deploy a cloud native application using public cloud services
C04	Adopt Cloud security policies, Monitor and troubleshoot basic issues in Cloud services
C05	Administer cost, privileges and manage an existing deployed network

Detailed course plan

Week	CO	PO	Days	1 st session (9am to 1 pm)	L	T	P	2 ND session (1.30pm to 4.30pm)	L	T	P
1	1	1	1	Building blocks of cloud computing <ul style="list-style-type: none"> - Introduction - Basic Architecture of Computer - Servers vs Desktop and laptops - Client-Server Computing - Hard Drives - HDDs and SDDs - Storage - block vs file vs object - Distributed Networking 	3		1	<ul style="list-style-type: none"> - IP addressing - Networking - Routers and Switches - Networking - Firewalls - Databases - Server virtualization - Docker Containers - Application Programming Interfaces (API) 	2		1
	1	1	2	Introduction to cloud computing <ul style="list-style-type: none"> - Introduction - From Mainframes to Clouds Evolution – How to host an application in traditional IT Infra - What is Cloud Computing - Example Cloud Application deployment 	2		2	Cloud Computing Service Models <ul style="list-style-type: none"> - Software as a Service (SaaS) - Platform as a Service (PaaS) - Infrastructure as a Service (IaaS) Cloud Deployment Models – <ul style="list-style-type: none"> - Public - Private - Hybrid - Community List out the examples for each cloud models Benefits of Cloud	2		1
	1	4	3	Cloud Architecture <ul style="list-style-type: none"> - Introduction 	3		1	<ul style="list-style-type: none"> - Monolithic and Microservices Architectures 	2		1

				<ul style="list-style-type: none"> - Stateful vs Stateless Service - Scaling up vs Scaling out - Load Balancing - Fault Tolerance - Loose coupling 				<ul style="list-style-type: none"> - Event-driven Architecture - List out the Popular Cloud service providers along with their features (AWS, Azure, GCP) - Open-Source cloud computing platforms 			
	1	4	4	AWS Cloud Overview <ul style="list-style-type: none"> - Amazon Web Service (AWS) - Regions and AZ - Creating an AWS Account - Shared Responsibility Model and AWS Acceptable Policy 	1		3	<ul style="list-style-type: none"> - Tour of AWS Console and Services in AWS hands-on 			3
			5	Developmental Assessment				Assessment Review and corrective action			3
	1	1,5	6	Industry Class: Build blocks of Cloud Computing	2			Weekly Assignment(1PM-2PM)			
2	1	1	1	Peer Review			4	AWS Identity and Access Management (IAM) Services <ul style="list-style-type: none"> - What is IAM ? - What is IAM used for ? - Principle of least privilege - IAM Introduction: Users, Groups, Policies - IAM Users & Groups Hands on 	1		2

							<ul style="list-style-type: none"> - IAM Policies - IAM Policies Hands On 			
2	1,4	2	<ul style="list-style-type: none"> - AWS IAM Multi-factor authentication (MFA) Overview - IAM MFA Hands On - AWS Access Keys, CLI & SDK - AWS CLI Setup - AWS CLI Hands On - AWS Cloud Shell 	1	3	<ul style="list-style-type: none"> - IAM Roles for AWS Services - IAM Roles Hands On - IAM Security Tools - IAM Security Tools Hands On - IAM Best Practices <p>Cloud Computing instances in AWS</p> <ul style="list-style-type: none"> - Virtualization in Cloud Computing - What is Virtualization? - Virtualization as a Concept of Cloud Computing - Architecture of Virtualization - Types of Virtualizations 	1		2	
1,2	4	3	<p>Amazon Elastic Compute Cloud (Amazon EC2) Instance</p> <ul style="list-style-type: none"> - EC2 Basics - Create a EC2 instance with EC2 user data - EC2 instance types basics - Security groups and classic ports 	1	3	<ul style="list-style-type: none"> - Lab - Security Groups - How to SSH to EC2 Instance - EC2 Instance Connect - EC2 Instance Roles Demo - Private vs Public vs Elastic IP - Lab - Private vs Public vs Elastic IP - EC2 Placement groups - Lab - EC2 Placement groups 	1		2	

							-			
1	1,3,	4	<ul style="list-style-type: none"> - Elastic Network Interface (ENI) Overview - Lab - ENI - EC2 Hibernate - Lab - EC2 Hibernate - EC2 Advance concepts (Nitro, vCPU, Capacity Reservations) - Amazon Elastic Block Store EBS Overview - Lab - EBS - EBS Snapshots - Lab - EBS Snapshots 	2	2	<ul style="list-style-type: none"> - Amazon Machine Image (AMI) Overview - Lab - AMI - EC2 Instance Store - EBS Volume Types - EBS Multi-Attach - EBS Encryption - EFS - Lab - EFS - EFS vs EBS 	1	2		
		5	Developmental Assessment			Assessment Review and corrective action		3		
1,5	2,3,4	6	Industry Class: Amazon EC2 Instance and IAM	2	3	Weekly Assignment				
3	1,5	2,3,4	1 Peer Review Mini Project/ Activity – Status review		4	Cloud Networking <ul style="list-style-type: none"> - Introduction - CIDR, Private vs Public IP - Subnet Overview - Networking - VPC - Default VPC Overview - VPC Overview 	2	1

CIE and SEE Assessment Methodologies

CIE Assessment	Assessment Mode	Duration In hours	Max Marks
Week 3	CIE 1- Written and practice test	4	30
Week 5	CIE 2- Written and practice test	4	30
Week 7	CIE 3- Written and practice test	4	30
Week 9	CIE 4- Written and practice test	4	30
Week 11	CIE 5- Written and practice test	4	30
	On line Course work (Minimum 10 hours online course with certification from (SWAYAM/NPTEL/Infosys Springboard)		40
	Profile building for Internship / Submission of Synopsys for project work		20
Portfolio evaluation (Based on industrial assignments and weekly developmental assessment) *			30
TOTAL CIE MARKS (A)			240
SEE 1 - Theory exam (QP from BTE) Conducted for 100 marks 3 hrs duration reduced to 60 marks		3	60
SEE 2 - Practical		3	100
TOTAL SEE MARKS (B)			160
TOTAL MARKS (A+B)			400

* The industrial assignment shall be based on peer-to-peer assessment for a total of 10 marks (on a scale of 1 to 10) and in the event of a group assignment the marks awarded will be the same for the entire group, the developmental assessment will be for a total of 20 marks and based on MCQ/case study/demonstration and such other assignment methods

Assessment framework for CIE (1)**Note: Theory to be conducted for 1 hour and practice for 3 hours, total duration of exam – 4 hours**

Programme	Computer Science Engineering	Semester	V
Course	Cloud Computing	Max Marks	30
Course Code	20CS53I	Duration	4 hours
Name of the course coordinator		CIE	1(3RD WEEK)

Note: Answer one full question from each section.

Qn.No	Question	CL L3/L4	CO	PO	Marks
Section-1 (Theory) – 10 marks					
1.a)	What are the steps involved in creating the VPC in AWS.	L4	1,2		5
b)	Suppose you are hosting a e-commerce application on cloud. Illustrate with example how do the following factors affect the cloud infrastructure. 1. Scaling up vs Scaling out 2. Load Balancing 3. Fault Tolerance 4. Loose coupling 5. Stateful vs Stateless Service	L3	1,2		5
2.a)	What is AWS IAM? Illustrate the need of AWS IAM Multi-factor authentication (MFA) with example.	L4	1,2		5
b)	How do you control traffic in and out of AWS EC2 instance.	L3	1,2		5

Section-2 (Practical) - 20 marks								
3)	. Create a Custom Amazon VPC by demonstrating the following				L3	1,2		20
	1. Sign in to the AWS Management Console as an administrator or power user.							
	. 2. Select the Amazon VPC icon to launch the Amazon VPC Dashboard.							
	3. Create an Amazon VPC with a CIDR block equal to 192.168.0.0/16, a name tag of My First VPC, and default tenancy.							
	Scheme of evaluation:							
	Sl.	Description	Marks					
	1	Sign into AWS Management Console	5					
	2	Launch of Amazon VPC	5					
	3	Creation of VPC	10					
4)	Create an Amazon Elastic Compute Cloud (Amazon EC2) instance.				L3	1,2		20
		Sl.	Description	Marks				
		1	Launch of EC2 instance	5				
		2	Configuration of EC2 instance	5				
		3	Termination of instance	10				

Note : Theory questions shall be aligned to practical questions

Assessment framework for SEE 1 (Theory) – 100 Marks / 3 hours (Reduced to 60 marks)

Program : Computer Science Engineering			Semester: Vth	
Course : CLOUD COMPUTING			Max Marks: 100	
Course Code : 20CS53I			Duration :3 Hrs	
Instruction to the Candidate: Answer one full question from each section.				
Q. No	Question	CL	CO	Marks
Section-1				
1.a)	Why is AWS more economical than traditional data center for applications with varying compute workloads? Illustrate with the example.	3	1,2	10
b)	How does AWS IAM improves the security of the applications? Illustrate the Multi-factor authentication (MFA) with example.	4		10
2.a)	Illustrate the following AWS Cloud services a. EC2 Instances b. S3 Storage c. AWS Shield d. WAF Firewall e. NACL	4		10
b)	Illustrate the steps involved in creating an AWS EC2 Instance.	3		10
Section-2				
3.a)	Differentiate between Security Group and NAC in AWS	3	1,2	10
b)	Explain the steps involved in Securing a new AWS account from Account root user.	4		10
4.a)	How is Elastic Load Balancer (ELB) and Auto Scaling Groups (ASG) are used?	4		10
b)	Write a note on the following a. VPC b. Subnets c. Security groups d. Route Table	4		10

Section- 3				
5.a)	How to configure an Amazon S3 bucket for static website hosting.	3	1,3	10
b)	Create a Amazon S3 bucket for pre-signed URLs.	3		10
6.a)	Explain different Amazon S3 object-level storage classes available with use cases.	3		10
b)	Explain the Amazon EFS features and illustrate the steps in Amazon EFS implementation.	3		10
Section-4				
7.a)	A company wants to store data that is not frequently accessed. What is the best and cost-effective solution that should be considered? Compare the same with traditional methods.	4	1,4	10
b)	What are the Amazon Managed services responsibilities?	4		10
8.a)	What is the AWS Well-Architected Framework? Explain the pillars of Well-Architected Framework	3		10
b)	Highlight the benefits of Container services and steps involved in Kubernetes service in AWS	4		10
Section-5				
9.a)	Illustrate the following in Microsoft Azure. 1. Regions, Region Pairs, Sovereign Regions 2. Availability Zones and Data Centers, Resources, Resource Groups	3,4	1,5	10
b)	Different types of storage account in MS Azure Cloud.	3,4		10
10.a)	What are Virtual Networks in MS Azure Cloud. Explain with example.	3		10
b)	Write a note on Virtual Machine Security Best Practices in Azure Cloud.	4		10

Scheme of Evaluation for SEE 2 (Practical)

Sl. No	Description	Marks
Problem Statement:	Suppose client wants to migrate web application that is on-prem into cloud. How to create an EC2 Instance, deploy the application and create the AWS S3 storage.	
1	Deploy a simple application in AWS Cloud by creating the instances.	25
2	Create a S3 storage in AWS	20
3	<p>Create a VPC for the below architecture in AWS Cloud.</p>  <p>The diagram shows an AWS Cloud environment with a Region containing two Availability Zones: Availability Zone A and Availability Zone B. A VPC with IP range 10.0.0.0/16 spans both zones. In Availability Zone A, there is a Public subnet 1 (10.0.0.0/24) containing a NAT gateway, and a Private subnet 1 (10.0.1.0/24). In Availability Zone B, there is a Public subnet 2 (10.0.2.0/24) containing a Security group and a Web server, and a Private subnet 2 (10.0.3.0/24). An Internet gateway is shown connecting the public subnets to the Internet.</p>	20
4	Create the Virtual machine and Storage in Microsoft Azure cloud.	25
5	Viva voce/Result	10
Total		100

Equipment/software list with Specification for a batch of 20 students

Sl. No.	Particulars	Specification	Quantity
9.	Computers	Intel i5, 4GB RAM, 500GB SSD	20
10.	AWS and AZURE Cloud account - Students subscription	Atleast \$100 for each account	20 AWS account 20 Azure account
11.	Broadband connection	Atleast 250MBPS	1

Cyber Security

Government of Karnataka

DEPARTMENT OF COLLEGIATE and TECHNICAL EDUCATION

Program	Computer Science & Engineering	Semester	5
Course Code	20CS54I	Type of Course	L:T:P (104:52:312)
Course Name	Cyber Security	Credits	24
CIE Marks	240	SEE Marks	160

Introduction:

Welcome to the curriculum for the Artificial Intelligence and Machine Learning (AI&ML) Specialisation. This specialisation course is taught in Bootcamp mode. Bootcamps are 13 weeks, intense learning sessions designed to prepare you for the practical world – ready for either industry or becoming an entrepreneur. You will be assisted through the course, with development-based assessments to enable progressive learning.

In the era of connected computing devices, securing the personal data, application, system, network and organization becomes the challenging task in the field of Computer science and Engineering. The specialization prepare students to take up job or to become entrepreneur in the challenging area of Cyber security

Pre-requisite

Before the start of this specialisation course, you would have completed the following courses;

In the 1st year of study, you would have studied Engineering Mathematics, Communication Skills, Computer Aided Engineering Graphics, Statistics & Analysis, Basic IT Skills, Fundamentals of Computer, Fundamentals of Electrical and Electronics Engineering, Project Management skills and Multimedia & Animation.

In the 2nd year of study, you would have studied Python Programming, Computer Hardware, Maintenance and Administration, Computer Networks, Database System Concepts and PL/SQL, Data Structures with Python, Operating System and Administration, Object oriented programming and Design with Java, Software Engineering principles and practices.

In this year of study, you shall be applying your previous years learning along with specialised field of study into projects and real-world applications.

Course Cohort Owner

A Course Cohort Owner is a faculty from the core discipline, who is fully responsible for one specialised field of study and the cohort of students who have chosen to study that specialised field of study.

Guidelines for Cohort Owner

1. Each Specialized field of study is restricted to a Cohort of 20 students which could include students from other relevant programs.
2. One faculty from the Core Discipline shall be the Cohort Owner, who for teaching and learning in allied disciplines can work with faculty from other disciplines or industry experts.
3. The course shall be delivered in boot camp mode spanning over 12 weeks of study, weekly developmental assessments and culminating in a mini capstone.
4. The industry session shall be addressed by industry subject experts (in contact mode/online / recorded video mode) in the discipline only.
5. The cohort owner shall be responsible to identify experts from the relevant field and organize industry session as per schedule.
6. Cohort owner shall plan and accompany the cohort for any industrial visits.
7. Cohort owner shall maintain and document industrial assignments, weekly assessments, practices and mini project.
8. The cohort owner shall coordinate with faculties across programs needed for their course to ensure seamless delivery as per time table
9. The cohort owner along with classroom sessions can augment or use supplementally teaching and learning opportunities including good quality online courses available on platforms like Karnataka LMS, Infosys Springboard, NPTEL, Unacademy, SWAYAM , etc.

Course outcome: A student should be able to

C01	Design, optimize, operate and maintain a secure network/system/application/cloud and data resources for given requirements
C02	Apply cryptography to secure a cyber system.
C03	Respond to incidents to mitigate immediate and potential threats .
C04	Test, implement, deploy, maintain and review the infrastructure to effectively manage the network and resources.
C05	Monitor network to actively remediate unauthorized activities.

Detailed course plan

We ek	C O	P O	Da ys	1 st session (9am to 1 pm)	L	T	P	2 ND session (1.30pm to 4.30pm)	L	T	P
1	1	1	1	<ul style="list-style-type: none"> - Protecting your personal data <ul style="list-style-type: none"> Online identity Where is your data ? Smart devices What do attackers want ? Identity theft - Protecting your organization data <ul style="list-style-type: none"> Traditional data Cloud; IoT; Big data - Types of data <ul style="list-style-type: none"> Sensitive and non sensitive data Personal data, PII data - Data classification <ul style="list-style-type: none"> Ex: Govt. of India classification of data Unclassified Restricted Confidential Secret Top secret 	4	-	-	<p>Introduction and Basic concepts of cyber security</p> <ul style="list-style-type: none"> What is Cyber security, Security principles CIA, AAA Vulnerability, Threat, Risk, attack and Impact People, Process and Technology McCumbers Cube <p>Cyber Security</p> <ul style="list-style-type: none"> - Brief history and types - Infrastructure, network, cloud, IOT, application. - Purpose and Importance - Challenges - Applications <p>How does cyber security work?</p>	3		

1	1,5	2	Recap – Topology OSI Model TCP/IP Model Internet protocols Network resources Router and Firewall, Hub, switch – security issues Basic Network terminologies	3	1	Hackers Who are they? What is not hacking Types of hackers Hacking methodologies Purpose Activity: Stuxnet - a case study	1	2
1,2,3	1,2,3	3	Analysing a Cyber Attack Types of Malwares Spyware Malware Backdoor Ransomware Scareware Rootkit Virus Trojan horse Worms Symptoms of attack Methods of Infiltration Social Engineering Pretexting Tailgating Something for something (quid pro quo) Denial-of-Service and DDoS Botnet On the Path attack	3	1	<ul style="list-style-type: none"> - Defence in depth - What is defence in depth - Layers - Needs for Defence in depth - Examples - Host encryption - Anti-virus - Firewall - E-Mail gateway - Password management - Honeypot - Multi Factor Auth 		3

			<p>SEO Poisoning Wi-Fi Password Cracking Password Attacks Password spraying Dictionary attack Brute force Password Cracking Times Rainbow Traffic interception</p> <p>Advanced Persistent Threats Security Vulnerability and Exploits Hardware Vulnerabilities Meltdown and Spectre Software Vulnerabilities Categorizing Software Vulnerabilities Software updates</p>							
1,2,3	1,2,3	4	<p>Data Maintenance Using free tools Back Up Your Data How Do You Delete Your Data Permanently? Tools Who owns your data? Terms of service Understand the term; what are you agreeing to? The data use policy Privacy settings Before you sign up protect your data Activity: Check terms of service of the popular application you use on your phone and check their data sharing policy, access to device etc.</p>	2	1	1	<p>Protecting Your Computing Devices</p> <ul style="list-style-type: none"> turn the firewall on install antivirus and antispyware manage your operating system and browser set up password protection. 			3

				Safeguarding Your Online Privacy Two Factor Authentication Open Authorization Social Sharing Email and Web Browser Privacy Activity: Discover your own risky online behaviour Scenario 1: posting private info on social media Scenario 2: What password you choose when creating new account for social service Scenario 3: Using public Wi-Fi - Scenario 4: Using trial version of the software Activity: Check if your password is compromised Note :Use Have I been pwned -

		5	Developmental Assessment			Assessment Review and corrective action			
		6	Industry Class :	2	3				
13		1	Internship a) Secondary research on various industries and their operations to identify at least 3 companies along with the areas of work interest and develop an internship plan that clearly highlights expectations from the industry during the internship. b) Design and develop a cover letter for an internship request to all 3 identified companies and the resume to be submitted to potential companies. c) Prepare for an internship interview to highlight your interests, areas of study, career aspirations and personnel competence - including the areas of learning you expect to learn during internship.			Project a) Identification of the problem statement (from at least 3 known problems) the students would like to work as part of the project - either as provided by faculty or as identified by the student. Document the impact the project will have from a technical, social and business perspective. b) Design and develop the project solution or methodology to be used to solve at least one of the problems identified. c) Prepare a project plan that will include a schedule, WBS, Budget and known risks along with strategies to mitigate them to ensure the project achieves the desired outcome.			

****Note:** Saturday session from 9 AM -2 PM

CIE and SEE Assessment Methodologies

CIE Assessment	Assessment Mode	Duration In hours	Max Marks
Week 3	CIE 1- Written and practice test	4	30
Week 5	CIE 2- Written and practice test	4	30
Week 7	CIE 3- Written and practice test	4	30
Week 9	CIE 4- Written and practice test	4	30
Week 11	CIE 5- Written and practice test	4	30
	On line Course work (Minimum 10 hours online course with certification from (SWAYAM/NPTEL/Infosys Springboard)		40
	Profile building for Internship / Submission of Synopsys for project work		20
Portfolio evaluation (Based on industrial assignments and weekly developmental assessment) *			30
TOTAL CIE MARKS (A)			240
SEE 1 - Theory exam (QP from BTE) Conducted for 100 marks 3 hrs duration reduced to 60 marks		3	60
SEE 2 - Practical		3	100
TOTAL SEE MARKS (B)			160
TOTAL MARKS (A+B)			400

* The industrial assignment shall be based on peer-to-peer assessment for a total of 10 marks (on a scale of 1 to 10) and in the event of a group assignment the marks awarded will be the same for the entire group, the developmental assessment will be for a total of 20 marks and based on MCQ/case study/demonstration and such other assignment methods

Assessment framework for CIE

Note : Theory to be conducted for 1 hour and practice for 3 hours, total duration of exam – 4 hours

Programme	Computer Science & Engineering	Semester	V
Course	Cyber Security	Max Marks	30
Course Code	20CS54I	Duration	4 hours
Name of the course coordinator			

Note: Answer one full question from each section.

Qn.No	Question	CL L3/L4	CO	PO	Marks
Section-1 (Theory) – 10 marks					
1.a)	<p>Why do see this kind of “Captcha” in web applications ? What difference does it make to any web based application ?</p> 	L4	1		6
b)	Your creating new password for your online banking, how will you strengthen your password elaborate ?	L4	1		4
2.a)	Let $p = 191$ and $q = 2$. Alice picks $x = 42$ and B picks $y = 33$. Compute the shared secret between Alice and Bob using Diffie-Hellman key exchange protocol.	L4	1		5
b)	Given an implementation of RSA algorithm that uses primes $p = 5$ and $q = 11$, if the encryption key is 27, what is the decryption key?	L4	1		5
Section-2 (Practical) - 20 marks					
3).a	You’ve just been issued with a new laptop at your organization and are getting ready to set it up. What steps would you take to secure it before use?	L4	1		10

Scheme of evaluation						
Sl. No	Description	Marks				
1	Setting up password	5				
2	Installing antivirus and fire wall	10				
3	Firewall Windows/Linux settings	5				
Total		20				
b	Design a simple crypto system (including key generation, encryption, decryption, digital signature or hash function) using any tool					
Scheme of evaluation						
Sl. No	Description	Marks				
1	Designing crypto system	5				
2	Key generation	5				
3	Encryption/Decryption	5				
4	digital signature or hash function	5				
Total		20				

Note : Theory questions shall be aligned to practical questions

Assessment framework for SEE (Theory) – 100 Marks / 3 hours (Reduced to 60 marks)

Programme: Computer Science & Engineering		Semester: V		
Course: Cyber Security		Max Marks: 100		
Course Code: 20CS54I		Duration: 3 Hrs		
Instruction to the Candidate: Answer one full question from each section.				
Qn.No	Question	CL	CO	Marks
Section-1				
1.a)	Which is the security protocol applied at layer 3 of the OSI stack? What are its benefits	L3/L4	1	10
b)	What is the need of defence in depth for a network ?	L3/L4		10
2.a)	How do you apply Microsoft Secure SDLC in each stage of software development ?	L3/L4		12
b)	Your creating new password for your online banking, how will you strengthen your password elaborate ?	L3/L4		8
Section-2				
3.a)	Let $p = 191$ and $q = 2$. Alice picks $x = 42$ and B picks $y = 33$. Compute the shared secret between Alice and Bob using Diffie-Hellman key exchange protocol.	L3/L4	2	14
b)	Find Euler totient function: $\phi(255)$, $\phi(256)$	L3/L4		6
4.a)	Given an implementation of RSA algorithm that uses primes $p = 5$ and $q = 11$, if the encryption key is 27, what is the decryption key?	L3/L4		12
b)	What is the final digit and two final digits of 3^{10000} ?	L3/L4		8
Section- 3				
5.a)	Describe Stages and life cycle of incident management	L3/L4	3	12
b)	What is the need of Dynamic File analysis ?	L3/L4		8
6.a)	Create a Threat Model for a social media Web Application at Design Time	L3/L4		10

b)	Describe shared responsibility model in cloud	L3/L4		10
Section-4				
7.a)	How do you find vulnerability in your cloud based web application ? what are the common vulnerabilities ?	L4	4	12
b)	Illustrate setting up multi factor authentication on any public cloud system	L3		8
8.a)	Highlight deprecated unsafe functions in common programming languages	L4		10
b)	What is the need of static code analysis, Static Code Analysis Tools – Explain with examples	L4		10
Section-5				
9.a)	Illustrate lifecycles of security incident management	L3	5	8
b)	Design a sample cyber security dashboard for reporting to top management	L4		12
10.a)	Identify use case of how changes or configuration in IT systems impacts security configuration resulting in cyber risk exposure	L4		12
b)	Give two KRI examples each for the following domains: a. Patch Management b. Anti-virus management	L4		8

Assessment framework for SEE 2 (Practice)

Problem Statement : Conduct Penetration testing on any web site/web application and report the vulnerabilities	
Scheme of Evaluation	
1) Installing ZAP	20
2) Running an automated scan	20
3) Exploring the application manually 1. Explore pages protected by login 2. Exploring web application over a defined sequence	30
4) Prepare a vulnerability report	20

5) Viva-voce (about the attack on discovered vulnerability and possible solutions)	10
Total	100

Note: Examiner to prepare/identify the web site/application to be tested and the vulnerabilities present in the web site/web application before exam

Equipment/software list with Specification for a batch of 20 students

Sl. No.	Particulars	Specification	Quantity
12.	Computers	Intel i5, 4GB RAM, 500GB SSD	20
13.	Cloud – AWS/AZURE/GCP or any similar public cloud environment		20
14.	Broadband connection	Atleast 50MBPS	1
